

What's NEW

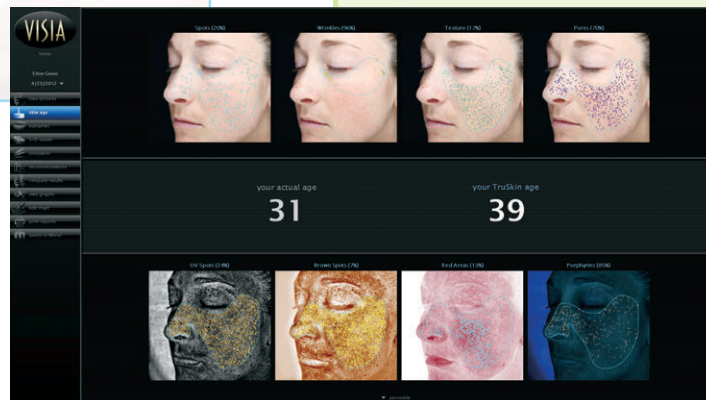

in version 6.4

ViewMyConsult™

By accessing this secure, password protected web portal, patients can now view their VISIA images, analysis and treatment recommendations in the comfort and privacy of their own home. On the practice side, physicians can access a feature-rich dashboard that displays clear analytics on patient visits, page views, queries and more.

Canfield's new **TruSkin Age™** consultation tool, available exclusively on VISIA Complexion Analysis Systems, applies VISIA's analysis of eight skin features to determine the patient's overall skin condition and age. This provides a revolutionary new metric that can guide the selection of skin care and treatment options.

The new **VISIA iPad®** app combines full featured VISIA consultations with the convenience of a tablet. Skin care professionals can now access all of their client images and data from anywhere in the practice, using VISIA's familiar graphical user interface. This provides a more engaging consultation experience for the client, and greater flexibility and convenience for the practice staff.

Expanded product recommendations
data base now includes over 240 brands representing over 4,000 individual products.
